ADMIN PARTNER MODULE GUIDE

Partner Module: admin operating guide

From application review and commercial setup through activation, engagement, customer invoicing, onboarding and commission close.

1 Application intake

Use Partners -> Applications for people who want to become MartPoint partners. Use Prospects for an unattributed prospect who may be invited to apply.

- Do not invite a partner-owned customer lead to become a partner.
- Partner-owned leads stay in the partner referral workflow.

2 Review application, meetings and assessment

Open the application reference. Confirm identity, business details, requested partner type, geography, experience, documents, assessment results and discovery notes. Record meetings and follow-up, request more information when needed, then approve, reject or conditionally approve.

3 Create and preview the Agreement

On the partner record, create the agreement draft and progress it through Legal review, Commercial review, Approved for signature, Sent for signature and Executed.

- Use Bring into force only when the version should govern the live relationship.
- Use Generate preview or Preview document to inspect the stored document.
- Confirm the document appears in the partner Documents screen.

4 Create the Commission Schedule

Select Draft new version. Enter first-year rate, first-renewal rate, protection days, holding days, payout days after month-end, approved split and the justification for non-standard terms.

- Standard terms shown are 10% first year, 5% first renewal, 90-day protection, 30-day holding and 14 days after month-end.
- The signed schedule controls the commission engine; do not create a code exception.
- Generate a preview and confirm the partner can open it in Documents.

5 Activation gates and portal access

Verify the partner record and identity, executed Agreement, executed Commission Schedule, payout and tax profile, orientation and conduct acknowledgement. Resolve every missing readiness gate before activation.

- Use the Users tab to invite the owner or additional partner users.
- Activate only when all required gates are green.
- Activation creates the activation confirmation document.

6 First engagement: lead to quote

The partner registers the customer opportunity. Admin reviews the lead, status, protection, duplicate or matching information and requested information. When the partner submits a quote request, create the real Finance quote first, then enter its quote number when issuing the request.

- Reviewing means Sales is working on the request.
- Issue quote requires the approved Finance quote number and a decision note.

- The partner can review/download and accept or decline the linked quote.
- An accepted quote is not a payment, customer conversion, invoice or commission.

7 Customer acceptance to formal invoice

When the customer is ready to buy, confirm the customer business record and primary contact email. If needed, review Referral Decisions and convert the referral when the business is ready.

- Open Finance -> Invoices.
- Create the invoice for the customer business, add agreed line items, check due date, public notes, tax and total.
- Select Issue. The system emails the primary contact and attaches a PDF.
- Use Send to resend and Send reminder for a due or overdue balance.

8 Payment and receipt handoff

The invoice email tells the customer to quote the invoice number when paying by bank transfer. The partner may submit the amount, bank reference, and proof from the assigned customer Finance screen. Admin or Finance verifies and confirms the payment, then sends payment confirmation and receipt.

- The partner submission is pending evidence only; it is not confirmation.
- The partner must not issue a parallel invoice or mark a payment paid.

9 Onboarding and engagement

Open Onboarding for the converted customer. Initiate onboarding, send setup questions, review responses and documents, update stages and send access details when ready.

- Track intake, payment confirmation, information, setup review, provisioning, business setup, training and completion.
- Use the Work Orders tab on the partner record for approved scope, fees, due dates, milestones and evidence.
- Keep credentials and sensitive customer information in the approved workflow.

10 Commission close and troubleshooting

Acceptance starts protection; it does not create a commission. Eligibility depends on the active signed schedule, eligible collected revenue, activation where required, holding period, payment confirmation and Finance approval.

- Use Finance -> Commission Close for month-end review, approval, scheduling and payout.
- Use Payout Requests and Bank Changes for partner payouts and re-verification.
- If documents are missing, generate their previews from the signed instruments panel.
- If an invoice is not received, verify the primary email and that the invoice is Issued rather than Draft.

Key quote-to-cash rule

A partner Quote Request starts the handoff. Admin/Sales creates the real Finance quote, enters its quote number, and issues it. The partner/customer can accept it. Admin then converts the accepted quote into an invoice; Finance verifies the submitted payment proof.

Operating principle

Record every material decision in the relevant screen. The partner portal is for partner-facing status and work; customer billing and payment confirmation remain Admin and Finance responsibilities.
