MARTPOINT CREATOR NETWORK

Creator Content & Business Guide

A practical, creator-safe guide to explaining how MartPoint helps real businesses run with more clarity.

Use this guide when planning a video, carousel, interview or demonstration. It is written for public creator content and does not require technical product knowledge.

The safest rule: describe the business problem first, use only approved MartPoint assets, and never promise a result that MartPoint has not published.

What MartPoint helps with

MartPoint brings everyday business records into one practical workspace. The exact setup depends on the business, but creators can safely explain these broad outcomes:

- Record sales and issue customer receipts.
- Track products, quantities and stock movement.
- Keep customer records and follow-up information together.
- Review sales, stock and business reports instead of relying only on memory.
- Support online selling and customer enquiries where the business has those features enabled.
- Give owners clearer visibility across staff, products or branches where the selected setup supports it.

How to explain it

A strong creator explanation follows a simple sequence:

Step	Creator prompt	Example
1. Hook	Name a problem the audience recognises.	You counted stock all night and still do not trust the number.
2. Context	Show who experiences the problem.	A busy shop owner with sales happening across the day.
3. MartPoint way	Use the official screen or approved asset.	Show the relevant sales, stock or report view.

Step	Creator prompt	Example
4. Outcome	Explain the practical improvement without exaggerating.	The owner has a clearer record to review and act on.
5. CTA	Give one next step.	Book a free MartPoint demo - link in bio.

Business-type angles

Use the angle that matches the audience. Do not imply that one business has every feature or workflow shown in another business example.

Audience	Problems to explore	Safe content angle
Supermarkets and grocery	Fast checkout, many products, low-stock surprises, branch visibility.	A busy day from shelf to checkout: how better records help the owner see what happened.
Restaurants and food	Order mistakes, food cost, table flow, split payments and daily sales.	Follow one order from customer request to payment and end-of-day review.
Pharmacies and health retail	Product accuracy, expiry awareness, customer history and stock availability.	Show why careful records matter when customers need the right product quickly.
Fashion, beauty and personal care	Sizes, colours, styles, appointments and repeat customers.	Show how a business can organise products or customer follow-up more clearly.
Electronics, phone and gadget stores	Models, accessories, serial-aware sales, warranty follow-up and stock.	Tell the story of a customer purchase and the record needed after the sale.
Wholesale, distribution and services	Multiple customers, deliveries, invoices, jobs and payment follow-up.	Show how one clear record helps the team know what is owed, delivered or next.

Approved language

- Say: helps you track, organise, review, record, monitor or understand.
- Say: features depend on the business setup and the current MartPoint product offering.
- Say: book a demo to see the right setup for your business.
- Avoid: guaranteed profit, guaranteed sales growth, zero theft, zero errors or instant results.
- Avoid inventing prices, discounts, integrations, screens or features.
- Avoid showing customer personal data, staff passwords, private business figures or internal dashboards.

If a feature is not in the approved Creator Kit or public MartPoint material, do not guess. Ask the MartPoint team before publishing.

Before you publish

- Use official screenshots, logos, video and product descriptions from Creator Kit.
- Keep the content clear, honest and relevant to the chosen business type.
- Use the challenge brief requirements if the content is being submitted to a challenge.
- Include required disclosure and partnership wording where the platform requires it.
- Check names, numbers and product claims against the current public MartPoint information.
- Use one clear call-to-action and the correct creator tracking link when one has been issued.

Simple formats that work

- A short before-and-after story: paper, memory or scattered messages versus a clearer record.
- A shop-owner interview: ask what is hardest to know at the end of a busy day.
- A screen-led explainer: show one approved workflow and explain the business value.
- A day-in-the-life skit: dramatise a familiar problem, then show a better way to organise it.
- A myth-versus-fact video: correct one common misunderstanding without attacking competitors.
