PARTNER PORTAL GUIDE

Partner Portal: screen-by-screen guide

From first login through lead registration, quote requests, customer onboarding, invoices, commissions and support.

1 Log in and change your password

Open Partner Login and enter the email address and password for your partner user account. Select Sign In.

If you cannot remember the password, select Forgot password, enter your email, and select Send Reset Link. Open the email link, enter a password of at least 10 characters, confirm it, and select Reset Password.

- The reset page does not reveal whether an email is registered. Check your inbox and spam folder.

2 Dashboard, profile and team

The Dashboard is your starting screen. Use the sidebar to open Leads, Quotes, Customers, Work Orders, Earnings, Documents, Training, Compliance and Support.

- Keep Profile information current.
- Use Team to invite approved colleagues and assign the correct partner role.
- Read notifications about referrals, documents, assignments, payouts and account status.

3 Create a lead

Open My Leads, select Register Lead, complete the form, and submit it. Required fields include business name, contact name, phone, email, country, state, city, industry, business type and interested product.

- Add branches, estimated users, deal value and notes when known.
- Use real customer details and confirm permission to share them with MartPoint.
- Protection reserves an opportunity; it is not approval, a quote, an invoice or a commission.

4 Request a quote

Open Quote Requests, select an eligible registered lead, and enter plan or product, locations, estimated users, services requested, and notes or assumptions. Select Request quote.

- The request is reviewed by MartPoint Sales.
- Statuses are Submitted, Under review, Quote issued, Declined and Expired.
- An issued quote reference does not mean the customer has paid.

5 After the quote request

Wait for the status and quote reference in Quotes. Discuss the approved proposal with the customer, but do not change MartPoint pricing, promise discounts, or issue an invoice yourself.

- Admin reviews the request and chooses Reviewing, Issue quote or Decline.
- If the customer accepts, Admin moves the opportunity into the normal customer and Finance workflow.

6 How the customer receives and pays the invoice

After the customer is ready to buy, MartPoint creates and issues the formal invoice for the customer business. The invoice is emailed to the business primary email with the invoice number, due date, balance due and PDF attachment.

- The customer pays by bank transfer using the invoice number as reference and replies with proof of payment.

- Admin records and confirms the payment in Finance.
- The customer receives payment confirmation and a receipt.
- Unpaid invoices may receive reminders.

7 Customer onboarding and work orders

Open My Customers to view assigned businesses, contact details, access level, business status and deployment status. If you have onboarding-manager access, follow the customer onboarding workspace.

- Use Work Orders for approved implementation or delivery work.
- Record milestone evidence in the work order.
- Do not activate licences, collect licence payments, or promise unsupported features without written authority.

8 Documents, commission, payout and support

Documents contains the Referral Partner Agreement, Commission Schedule, activation records, assignments, statements and notices. Select Preview / download to open an issued document.

- Earnings follows protection, holding, eligibility, approval and payout.
- The signed Commission Schedule controls the rates and timing.
- Use Support for access, lead, customer, document and payout questions.

Important system boundary

The Partner Quote Request screen is a request-and-status tracker. It does not currently create the customer-facing Finance quote or invoice automatically. Customer commercial invoices and payment recording are handled by MartPoint Admin and Finance, not inside the Partner Portal.

What partners can see

Partners can see assigned customer and permitted onboarding information. Ask Admin for an invoice number or payment status rather than creating a second invoice.
